## Introduction

## Overview of the UAE Peaceful Nuclear Energy Program:

The UAE Peaceful Nuclear Energy Program is a strategic energy infrastructure program of national and international significance. The cornerstone of the UAE Program is the Barakah Nuclear Energy Plant. When fully operational, the plant will produce 5,600 MW of clean, baseload electricity 24/7 - preventing the release of 22.4 million tons of carbon emissions each year. equivalent to removing 4.8 million cars off the roads annually. Clean electricity is a key component of the solution to climate change and the Barakah plant is a positive success story, inspiring us to achieve a clean and sustainable future. The Barakah Plant is a powerhouse for the UAE's sustainable development, generating 24/7 clean electricity and supports the development of new industrial sectors in the country.

## Timeline for the Development of the UAE Peaceful Nuclear Energy Program

October 2009 UAE adopts its Federal Nuclear Law

September 2009 Inception of the UAE's independent nuclear regulator, the Federal Authority for Nuclear Regulation (FANR)

December 2009 Inception of the Emirates Nuclear Energy Corporation (ENEC) and Prime Contractor, the Korea Electric Power Corporation (KEPCO) selected

2010

FANR issues Construction License for Barakah Units 1 and 2

July 2012

July 2012 Pouring of safety-related concrete for Unit 1

2014

License Application for Units 1 and 2 on behalf of Nawah Energy Company

building

March 2015

November 2015 **ENEC** completes containment liner installation for Unit 2

January 2015 ENEC completes

concrete dome for Unit 1 reactor containment

ENEC submits Operating

2016

March 2018 Unit 1 construction completion

February 2020 FANR issues Operating License to Nawah Energy Company for Barakah Unit 1

February 2020 Nawah Energy Company commences the fuel loading for Unit 1

July 2020 Unit 2 Construction completion

July 2020 Unit 1 Reactor Start-up

August 2020 Unit 1 Grid Connection

2021

March 2022 Unit 2 Commercial Operations

April 2008 Publication of the UAE Policy on the Peaceful Use of Nuclear Energy

2008

2009

April 2010 ENEC submits environmental assessment and license applications for preliminary work at Barakah site

July 2010 FANR approves license requests for preliminary site preparation at Barakah

December 2010 ENEC submits Construction License Application for Barakah Units 1 and 2

April 2014 ENEC unveils state-of-the-art Simulator Training Center at the Barakah plant

2012

2015

February 2016 Unit 1 Cold Hydrostatic Test completed

August 2016 Unit 3 steam generators

October 2016 Financial Close

October 2016 ENEC and Korea Electric Power Corporation Joint Venture

November 2016 Barakah One Company and Emirates Water and Electricity Company sign Power Purchase Agreement

2018

July 2019 FANR certifies first group of 15 UAE National SROs and ROs

September 2019 53 SROs and ROs certified by FANR

2019

2020

September 2021 Unit 2 Grid Connection

August 2021 Unit 2 Reactor Start-up

April 2021 Unit 1 achieves commercial operation

March 2021 FANR issues Operating License to Nawah Energy Company for Unit 2 of Barakah

2022

## We Need Clean Electricity

The world needs clean electricity to maintain economic growth in an environmentally sustainable manner. The UAE's Barakah Plant generates large amounts of clean electricity and provides a proven solution to reduce climate change. Barakah provides the round the clock, baseload electricity required to support intermittent sources, such as solar. With this clean electricity, the UAE can achieve more by impacting less, and offers a bridge to other forms of low-carbon energy and continuing the Nation's success story on its journey to a carbon neutral economy.

#### Environmental impact:

Clean electricity from the Barakah Plant supports the decarbonization of the energy sector and the electrification of industries. Reliably generated 24/7 with zero emissions, electricity from Barakah sets the UAE on a clear course to achieving the UAE's Net Zero by 2050 initiative and achieving the Nation's commitments under the Paris Climate Change Agreement.

#### Economic impact:

The Barakah Plant is a
 powerhouse for the UAE's
 sustainable growth by delivering
 clean electricity 24/7 and
 supporting a new local industrial
 sector and supply chain. It
 spearheads the advancement
 of the intellectual wealth of the
 Nation and inspires the next
 generation to join the UAE
 Program to become clean
 energy leaders and innovators.

## A Blueprint For Success

#### 2008 national nuclear policy:

- In April 2008, the UAE released its Policy on 'The Evaluation and Potential Development of Peaceful Nuclear Energy'. This policy is built on the most exacting standards of safety, transparency and security, making the country a role model for nuclear energy development worldwide.
- The policy emphasizes six key principles:
  - Complete operational transparency
  - 2. The highest standards of nonproliferation
  - 3. The highest standards of safety and security
  - Working directly with the International Atomic Energy Agency (IAEA) and conforming to its standards
  - 5. Partnerships with responsible nations and appropriate experts
  - 6. Long-term sustainability.

#### Regulatory oversight - FANR:

The UAE's Federal Authority for Nuclear Regulation (FANR) is the independent regulatory body responsible for oversight of nuclear safety, security, radiation protection and safeguards, and enforcement of global agreements entered into by the UAE. FANR was established in accordance with Federal Law issued by H.H. Sheikh Khalifa bin Zayed Al Nahyan, President of the UAE.

FANR regulates the design, siting, construction, operation and decommissioning of nuclear energy plants in the country. It also regulates all radioactive material and radiation sources used in medicine, research and other industries, and is committed to its core values of safety awareness and responsibility, competency, independence and transparency. FANR is independent of ENEC, Nawah and its employees.

#### International partnerships:

 From the start, the UAE has worked in conjunction with the International Atomic Energy Agency (IAEA) on its nuclear policy. Major program milestones such as fuel load can only be taken following receipt of international endorsements from the IAEA and the World Association of Nuclear Operators (WANO), and regulatory approval from FANR.

- Since 2009, ENEC and its operating subsidiary Nawah have been subject to more than 380 inspections by FANR.
- More than 44 missions and peer reviews from the World Association of Nuclear Operators (WANO) and the IAEA have been undertaken.
- All of the reviews and checks have ensured the highest international standards are met throughout the development and delivery of the UAE Program.

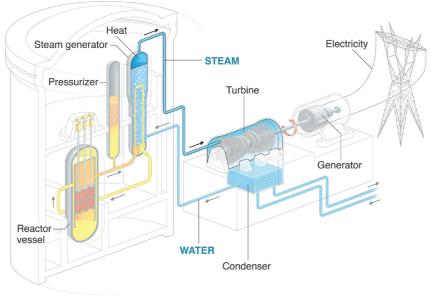

# How Does A Nuclear Energy Plant Work?

- A nuclear reactor produces electricity in much the same way as other energy plants.
- The difference is how the heat is created. In a nuclear energy facility, heat is produced from splitting atoms – a process called nuclear fission. This way of making heat generates no harmful emissions, including carbon emissions, making it one of the cleanest forms of electricity generation available.
- While carefully controlled, trillions
   of atoms fission each second
   in a nuclear reactor. This chain
   reaction process heats water, which
   produces steam. The steam travels
   through pipes to a turbine and spins
   the blades

 The turbine blades connect to a shaft that spins, turning the steam's energy into mechanical energy. The turbine shaft connects to a generator and the generator shaft spins around inside a set of electromagnets. The magnets create the electrical current that powers our homes and businesses.

## What Do We Do With The Nuclear Waste?

- The generation of clean electricity at the Barakah Plant results in very little waste being produced in the form of used nuclear fuel assemblies. The plant generates radioactive waste equivalent to the size of one aspirin tablet per person per year.
- The technology for managing the used fuel exists and has been safely stored in locations around the world for decades.
- The UAE plans to store used fuel on-site at the plant while it cools in fuel pools, before moving to concrete and steel containers called dry casks. These casks can be securely stored on-site at a nuclear energy plant or at an interim or long-term storage facility. The Barakah plant spent fuel pools have storage capacity for the first 20 years of operations.

The site for dry cask storage at the Barakah plant has undergone several years of study and investigation to prove its suitability. Once ready, it will be licensed by FANR before it can become operational.

## Why Is The Barakah Plant Located in Al Dhafra?

- The Barakah plant is located in the Al Dhafra Region of the Emirate of Abu Dhabi, approximately 53 kilometers southwest of the city of Ruwais.
- This location was selected based on several factors, including environmental, technical and commercial, following a comprehensive evaluation process led by local and international experts.
- The selection process was guided by best practices and standards from FANR, the Electric Power Research Institute, the U.S. Nuclear Regulatory Commission and IAFA.
- Factors that the UAE considered when selecting the site included seismic history, distance from large population centers, proximity to large supplies of water and to existing electrical

power grid. It also took into account proximity to industrial and transportation infrastructure, favorable construction, security and evacuation route conditions and ability to minimize environmental impact.

- 53 kilometers southwest of Ruwais.
- The IAEA verified the site selection through its Site and External Events Design (SEED) mission.
- In July 2010, FANR and the Environment Agency - Abu Dhabi (EAD) approved two licenses for preliminary work to begin at Barakah.
- In July 2012, FANR and the EAD granted final approval for Barakah to be the site of ENEC's first nuclear energy plant.

## Why The APR1400?

- From the outset, ENEC has made the safety of people, communities, environment and the plant an overriding priority. Safety always has, and always will, come first.
- ENEC's work with FANR, the IAEA, WANO and others has ensured that we have built not just a safe plant, but a safety-focused culture.
- Barakah comprises of four Generation III reactors called the APR1400.
- The APR1400 is one of the most technologically advanced nuclear reactor designs in the world and meets the highest international standards for safety and performance.

#### Key facts:

- Pressurized Water Reactor (PWR)
- Each reactor generates 1,400 Megawatts of power
- Operational life-span of 60 years.
- Based on the System 80+ design, which was certified by the Nuclear Regulatory Commission (NRC) in the United States of America.
- Certified by the national nuclear regulators of Korea, the UAE and the USA
- Shin Kori 3&4 are APR1400 technology reactors in South Korea that are the reference plants for the Barakah plant. Unit 3 entered commercial operation in 2016, and Unit 4 in 2019.

At the Barakah plant, ENEC has implemented a number of safety layers which would prevent anything similar to previous well-known accidents, such as Chernobyl and Fukushima from taking place. These include:

- The modern plant design with the latest safety systems. The APR1400 reactor design is certified by the independent national nuclear regulatory bodies of South Korea and the UAE, and the USA.
- Operator training and robust policies and procedures that embed safety as the overriding priority
- Promotion of a healthy nuclear safety culture
- Independent national and international regulatory and supervision organizations ensuring that the plant and its staff maintain the highest industry standards of safety and quality

## A Powerhouse for the UAE's Sustainable Growth

- The Barakah Plant is a key source of clean electricity for the UAE, helping to enable the Nation in meeting its climate change targets to achieve a clean and sustainable future.
- Clean electricity from the Barakah Plant is delivered to consumers and industries across the Nation, supporting growth without impacting the UAE's precious environment.
- The Barakah Plant promotes the advancement of the intellectual wealth of the Nation and inspires the next generations to join the UAE Peaceful Nuclear Energy Program and become clean energy leaders.
- Nuclear science and technology drives R&D in fields like medicine, agriculture, food technology and even deep space exploration, adding significant value to society and the economy.

- Operating at full capacity, Barakah Unit 1 is the single largest electricity generator in the UAE, delivering clean electricity 24/7.
- Once fully operational, the Barakah Plant will prevent the release of 22.4 million tons of carbon emissions every year, equivalent to removing 4.8 million cars of the roads annually.
- The UAE Peaceful Nuclear Energy Program supports a new industrial sector for high quality products and services; to date, more than 2,000 UAE companies have been awarded contracts worth more than \$4.8 billion.
- ENEC has over 3,000
   employees from over 50
   countries around the world.
  60% of staff are UAE Nationals.
- When fully operational, the Barakah Plant will prevent the same amount of yearly greenhouse gas emissions as 370 million trees would absorb over 10 years. That's the same as each person in the UAE planting 35 trees each annually!

## Operational Excellence

## شــركــة نــواة للـطـاقــة Nawah Energy Company

## Nawah Energy Company:

- Established in 2016, Nawah Energy Company (Nawah) will operate and maintain Units 1 to 4 at the Barakah Nuclear Energy Plant.
- Nawah is fully focused on the safe and sustainable operations of the four units at the Barakah plant, and ensuring a fully trained and certified team of nuclear professionals is available to undertake this important role over the next 60 years of operations.

#### Reactor Operators:

 Nawah has the technologically competent and highly skilled operators and engineers needed to operate the Barakah plant, delivering clean electricity to the UAE for decades to come. Having undergone years of training and certification, they will continue to undergo regular training throughout their careers to maintain their knowledge and expertise.  There are now 72 SROs and ROs certified – with 30 Emiratis amongst this team.

#### Emergency preparedness:

- New plants are designed and built to counter threats, both external and internal, that could impact the safety and operations of the plant.
- ENEC has conducted regular comprehensive safety design reviews, which demonstrated an industry-leading level of plant robustness against both natural and man-made hazards.
- Emergency preparedness plans are in place to protect both plant personnel and the local public.
   Public notification and emergency response systems have been developed across the UAE.

## Our People

- ENEC, Nawah and Barakah One Company employ more than 3,000 highly trained personnel, including the operators, engineers, technicians and support staff responsible for generation of clean electricity at the Barakah Plant. More than 60% of these employees are UAE Nationals.
- The Energy Pioneers program aims to attract and train the most talented science students and experienced professionals, inspiring the next generation of clean electricity leaders and innovators.

- 380 students have graduated from ENEC's Energy Pioneers Program
- More than 125 students in the pipeline to graduate
- More than 60% of these are UAE Nationals
- More than 20% are female
- Our employees represent more than 50 different nationalities

## Our Partners

- KEPCO, South Korea's single largest public power electric utility, was awarded the Prime Contract in 2009 to design, build and help operate the UAE nuclear energy plant.
- In 2016, ENEC signed a Joint Venture partnership with KEPCO, and created two subsidiaries: Nawah Energy Company, the operating and maintenance subsidiary of the Barakah plant, and Barakah One Company which manages the financial and commercial interests of the project. ENEC owns 82% and KEPCO owns 18% of each company respectively.
- KEPCO is recognized by WANO as a leader in safety, plant reliability and efficiency.
- KEPCO was chosen following an exhaustive year-long evaluation conducted by a team of 75 international experts who evaluated a variety of factors, including safety, deliverability and commitment to human resource development.

#### Other key partnerships:

- ENEC signed an agreement with French National Radioactive Waste Management Agency (Andra) in late 2019 to explore potential collaboration in the field of radioactive waste management.
- ENEC signed an MoU with Enusa Industrias Avanzadas, S.A., S.M.E. (ENUSA), defining a framework for collaboration and the exchange of information and expertise in the field of nuclear fuel services.
- Nawah signed a long-term framework agreement with France's EDF to support Nawah in the operation and maintenance of Barakah with services in areas including operational safety, radiation protection, fuel cycle management and environmental monitoring.

## Commitment To Non-Proliferation

- The UAE Peaceful Nuclear Energy Program has been developed to provide clean electricity as a solution to climate change and support emissions-free economic growth in full alignment to the Nation's Nuclear Law and its commitments to nonproliferation.
- The UAE Nuclear Law takes into account all obligations and commitments that stem from international instruments and obligations. The UAE views the application of a Comprehensive Safeguards Agreement, bolstered by the IAEA's Additional Protocol, as an important component of its model for the adoption of peaceful nuclear energy. This approach is consistent with the UAE's commitment to complete operational transparency and the highest standards of nonproliferation.
- As part of this commitment, the UAE will not enrich uranium or reprocess used fuel assemblies.
